Description / Deskribapena

WordNet is a lexical database of semantic relations between words. WordNet links words into semantic relations including synonyms, hyponyms, and meronyms and is used in automatic text analysis and artificial intelligence applications.

The Basque WordNet (Agirre et al., 2002) is also developed. In the latest distribution (2016), BWN had 30 263 synsets, 40 420 variants for nouns, 9 469 for verbs and 148 for adjectives. There were no variants for adverbs. As far as the size of BWN is concerned, its size is limited in comparison with wordnet in other languages, especially in the case of adjectives.

Goals / Helburuak

The objective of this task is to develop and evaluate a methodology to enrich the Basque WordNet using a sentiment lexicon, especially focusing on the adjectives.

Requirements / Betebeharraak

- Advanced skills in Basque language

Framework / Esparrua

- Language Resources
- WordNet
- Sentiment analysis

Tasks and plan / Atazak eta plana

1- Study the latest advances in Wordnet and sentiment analysis.

- [<http://nmis.isti.cnr.it/sebastiani/Publications/LREC10.pdf>] and [<https://github.com/aesuli/SentiWordNet/blob/master/papers/SWNFeedback.pdf>].
- [<http://www.ixa.eus/sites/default/files/dokumentuak/3417/eacl2014-qwn-ppv.pdf>].

2- Design a methodology to enrich the Wordnet using the sentiment lexicon.

3- Enrich the Wordnet with the developed methodology.

4- Evaluate the designed methodology.

5- Test/evaluate in a NLP application (sentiment analysis, WSD...)

6- Propose improvements for the future.

7- Write up the report
